European Pressure Directive

Certificate of Conformity for BaileyGill Refrigeration Components

Refrigeration and pipeline fittings produced under the BaileyGill brand name, for use in both high and low pressure refrigeration systems, have been type tested for a standard working pressure of 300 bar under normal operating conditions. (This does not include the shut off valves which have been type tested for a working pressure of 28 bar.)

These fittings under the BaileyGill brand name are produced in accordance with our ISO 9001:2008 accreditation.

Andrew Williams
